

# [실습 1]

The image displays a Visual Basic project with three code windows and two form windows.

**Project1 - Form1 (코드)**

```
Private Sub Command1_Click()  
    Dim i As Integer  
  
    na = txtName.Text  
  
    For i = 0 To 2  
        jum(i) = sung(i).Text  
    Next i  
  
    For i = 0 To 2  
        tot = tot + jum(i)  
    Next i  
  
    avg = tot / 3  
  
    Form2.Show  
End Sub
```

**Project1 - Module1 (코드)**

```
(일반) (선언)  
  
Public jum(2) As Integer  
Public na As String  
Public tot As Integer  
Public avg As Double
```

**Project1 - Form2 (코드)**

```
Form Load  
  
Private Sub Form_Load()  
    txtName2.Text = na  
    txtTot.Text = tot  
    txtAvg.Text = avg  
End Sub
```

**Form1 UI**

이름	홍길동
국어	80
영어	90
수학	100
입력	

**Form2 UI**

홍길동	학생의 총점은
270	이고 평균은
90	입니다.

An arrow points from the '입력' button in Form1 to the '270' text box in Form2.
